5<sup>th</sup> December 2017

Dear Parents and Carers

There is a measles outbreak in Liverpool affecting young unimmunised children. I have been asked by Cheshire East Education Authority to make you aware of this. Measles is highly infectious. It can cause serious illness and can sometimes be fatal. Vaccination with 2 doses of MMR is the only way to protect children and young people.

The first MMR vaccine is given to toddlers at the age of 13 months and the second injection at around 3 years and 4 months before your child goes to school. MMR can be given to older children, teenagers and young adults if they missed their injections when they were younger. **Contact your GP practice if your child needs an MMR vaccine.** The vaccine is free. If you are not sure if your child needs an MMR vaccine, you can contact the GP to ask.

**Measles can affect anyone at any age.** Teenagers, young adults and anyone who has missed their MMR vaccination can get measles. The first signs of measles are fever, cough, runny nose and red sore eyes. After a few days, a spotty rash will appear. It starts on the face and neck before spreading to the rest of the body.

If you think your child has measles, ring your GP practice for advice. Don't turn up to the surgery; walk in centre or to your nearest accident and emergency without calling ahead. The doctor will make special arrangements to see your child so that if your child has measles – they won't pass it on to others.

Please ensure that children with suspected measles are kept away from others to avoid spreading measles and kept at home for 5 days after the onset of the rash and away from school.

If you would like more information, see <https://www.nhs.uk/conditions/measles/>

Yours sincerely

L Hesmondhalgh
